

Splash₂o Aqua-Tower Lower Arm Section Replacement Instructions

PREPARATION:

- Disconnect unit from water supply and drain reservoir
- Remove all Aqua-Station
- Get a Phillips head screwdriver

1. Remove arm from base

- Start with the Aqua-Tower in the collapsed, storage position*
- Carefully lower and rest the unit on its side with the arm to be replaced on the top side*
- Disconnect the arm hose by loosening the threaded white connector.*
- Move the hose out of the way and remove hinge locking pins by pinching them together and pulling them out.*
- Remove arm off its pivot on the base by just firmly pulling on it. It should pop off.*

2. Disconnect valve and connector from the arm

- Using the Phillips screwdriver, unscrew the blue valve on the arm; set it aside for re-assembly later.*
- Turn arm upside down, pull firmly on the green connector at the end of the arm to pop it out, and remove the tubing assembly*

3. Replace and reconnect arm

- Separate lower arm and extension sections by lifting the locking tab, squeezing both tabs on the sides, and pulling the sections apart.*
- Align and push the new arm section to connect with extension section until it clicks fully into position. Push locking tab back in until it is flush with top surface.*
- Re-assemble arm to base by reversing steps above. Remember to re-connect the green connector and blue valve first.*
